

November 2012

Product Spotlight

Braided Hose Assemblies

From standard pipe sizes, end connections, and lengths to complex value added assemblies (check out the Application Spotlight), Keflex has you covered when it comes to braided hose assemblies. The Gold and Gold Plus series are made in Woodstock, IL and meet ARRA requirements. For those customers with tight budgets, the Silver Series is our most economical offering and comes in standard sizes only. If you need a hose assembly for intermittent flexing or just a static bend don't worry, we have those too. The factory is ready to meet your lead time needs too, contact Stephanie for those quick turnaround requirements.

Keflex Braided Hose Assemblies

Keflex Kudos—The \$100K Club

Congratulations to the team at JD Sales in my longtime hometown of Los Angeles for landing a fantastic \$100K plus Waste Water Treatment Plant job. They have stuck with it and worked this one for a couple of years. TWO THUMBS WAY, WAY UP! - TR

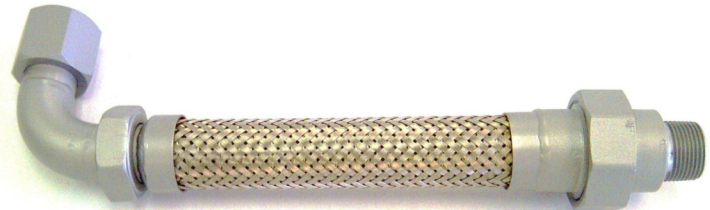

Reminder

Yes, we are rapidly approaching the end of the calendar year. Please note that the factory will be shut down the Friday after Thanksgiving, otherwise know as "BLACK FRIDAY". The factory will also be closed in December, the 21st through New Year's Day. We will reopen on January 2nd, 2013.

Application Spotlight

Refrigeration System

Keflex hose assemblies are now standard equipment for handling liquid ammonia in refrigeration equipment for a leading OEM. Keflex was able to create the special hose assemblies to meet specific design criteria in the system. Special refrigeration fittings are required to complete these hose assemblies.

Stainless Steel Braided Hose Assembly for Liquid Ammonia Service

Question of the Month

We regularly receive questions that have answers that would likely be applicable to everyone. We are going to start to post those here. Also, if anyone has a question that they would like to have the answer to, drop an email to me and I'll see that we get it answered here. Question for November: "Can Keflex manufacture a 3/4" Externally Pressurized Expansion Joint (EPEJ)?" YES! As a special, we use our standard 1" configuration and add a 1" reducer down to 3/4". Call or email us for more information.

TR's Tidbits

Whether you are a Democrat, Republican, or Independent, make sure your voice is heard. VOTE! Election Day is Tuesday, November 6th.—TR
